

Basic Cosmetics & Health Care E-Commerce Website

A complete product, UX and technical requirements document for a premium, human-designed, mobile-first shopping experience across Hair Care, Skin Care, Cosmetics, Health Care and Wellness — including Customer Login, Order Tracking and Admin Management.

Zen Nova Solutions

Prepared for Figma design hand-off & development scoping

Version 1.1

September 2026

Table of Contents

01	Project Overview	Business context & scope
02	Target Audience	Personas, behavior, trust concerns
03	Business Goals	Success metrics & priorities
04	Sitemap	Full information architecture
05	User Flow	Core shopping & account journeys
06	Homepage Requirements	Section-by-section spec
07	Shop / Product Listing Page	Filters, sort, grid, responsive
08	Product Details Page	Gallery, tabs, cross-sell
09	Cart Requirements	Line items, totals, empty state
10	Checkout Requirements	Steps, payment, security
11	Order Confirmation	Success state & next actions
12	My Account	Profile, orders, wishlist, addresses
13	Search Experience	Suggestions, results, no-results
14	Admin Dashboard	Products, orders, customers, reviews
15	Design System	Color, type, spacing, iconography
16	Component Library	21 reusable UI components
17	Responsive Requirements	1440 / 1280 / 768 / 390
18	Accessibility	WCAG 2.1 AA baseline
19	Functional Requirements	Feature matrix & order status
20	SEO & Performance	Technical & non-functional
21	Customer Login & Account	Login, signup, forgot password, guest
22	Order Tracking	Timeline, order details, actions
23	Admin Management	Login, dashboard, catalog, orders, inventory
24	Complete System Flow	Customer + admin, end to end
25	Final UX Checklist	Pre-handoff sign-off list

How to use this document

Section 15–18 (Design System, Component Library, Responsive, Accessibility) are the direct inputs for Figma. Sections 4–14 and 19, 21–24 define *what* each screen must do; a developer should be able to build the front end from these without further clarification. Section 25 is the final sign-off checklist before handoff.

Project Overview

A basic-scope but premium-feel e-commerce website selling five connected product families — Hair Care, Skin Care, Cosmetics, Health Care, and Wellness — to customers who are shopping for themselves or their household. The site must feel like it was designed by a person who understands beauty and health, not assembled from a template: warm, editorial, product-forward, and calm rather than "salesy."

Primary Goal

Help a customer discover the right product for a specific need (a concern, a routine, or a repeat purchase), understand why it works before they buy it, add it to cart with zero friction, check out in as few steps as possible, and track the order afterward without needing to contact support.

Scope of This Release

In Scope

Storefront (home, shop, PDP, cart, checkout, order confirmation), customer account area, product search, wishlist, reviews (display + submission), a basic admin dashboard for catalog/orders/customers/reviews, and COD + online payment checkout.

Out of Scope (v1)

Subscriptions/auto-replenishment, live chat, AR/virtual try-on, loyalty points, multi-currency, multi-vendor marketplace, and native mobile apps. These are noted as "Phase 2" opportunities where relevant so the architecture doesn't block them later.

Product Categories

Hair Care

Shampoo, conditioner, hair oil, serums, styling, hair fall & growth care.

Skin Care

Cleansers, moisturizers, serums, sunscreen, masks, treatments.

Cosmetics

Face, eye, lip, and skin-finish makeup products.

Health Care

OTC essentials, personal care devices, hygiene, first-aid adjacent items.

Wellness

Supplements, vitamins, sleep & stress support, daily wellness rituals — positioned as routine-building products rather than clinical/medical ones.

Design Intent

Attribute	What it means in this build
Human-designed	Asymmetric editorial moments on the homepage, real photography-style product imagery, intentional whitespace — not a centered-everything template layout.
Modern & clean	8pt spacing grid, restrained shadows, one accent color used sparingly, generous product image breathing room.
Premium	Warm ivory backgrounds instead of stark white, a plum/terracotta/gold palette instead of generic pastel-pink beauty or clinical blue-green health, confident typography.
Trustworthy	Ingredient transparency on every PDP, visible policies, real review content, secure-checkout signaling at every payment step.
Easy to shop	Shop by Category and Shop by Concern both lead to the same catalog — customers who know what they want and customers who only know the problem they have are served equally well.

Mobile-first	Every requirement in this document is specified mobile-first, then enhanced for tablet/desktop (Section 17).
Product-focused	Product photography and benefit copy carry the page — UI chrome stays quiet.

Explicitly avoid: centered hero + 3 generic icon columns + stock-photo banner layouts common to default Shopify themes; neon/electric gradients; oversized rounded "bubbly" UI; AI-cliché purple-to-blue gradients; clinical blue/green-only health palettes.

Target Audience

Three overlapping customer groups drive the majority of revenue. Design and copy should default to Persona A (largest, most frequent), while Persona B and C requirements are layered in rather than treated as edge cases.

A — The Routine Builder

PRIMARY

Who: 22–40, shops on mobile, follows skincare/haircare content online.

Needs: products that solve a named concern (acne, hair fall, dullness), ingredient clarity, real reviews.

Behavior: browses by concern before category, compares 2–3 products, reads reviews before adding to cart, revisits for repeat purchases.

Pain points: can't tell if a product is right for their skin/hair type; distrusts generic 5-star-only listings.

B — The Household Restocker

Who: 28–50, buys health care and wellness essentials for the family alongside personal cosmetics.

Needs: fast reorder, clear stock/delivery info, COD trust option.

Behavior: uses search directly ("hair oil", "vitamin C"), buys in bulk/multi-pack, checks past orders to reorder.

Pain points: checkout friction, unclear delivery timelines, hidden charges at payment.

C — The Gift & Occasion Shopper

Who: Any age, shopping for someone else (skincare gift sets, wellness gifts).

Needs: premium presentation, best-seller/trust signals since they can't judge fit personally, gift-worthy visuals.

Behavior: browses Best Sellers and Featured Products, relies heavily on ratings and review count.

Pain points: uncertainty about whether the recipient will like/need the product.

Shared Trust Concerns (design for all three)

- **Authenticity:** "Is this a genuine product and not a knockoff?" → brand badges, clear return policy, secure-payment iconography.
- **Fit:** "Will this work for my skin/hair/needs?" → concern-based navigation, ingredient and benefit clarity, honest review distribution (not only 5-star).
- **Value & delivery:** "What's the real total cost and when will it arrive?" → all-in pricing shown early, delivery estimate visible before checkout, no surprise charges at payment.

Purchase Motivations

Motivation	What it means for the design
Solve a specific concern	Shop by Concern is a primary nav path, not a buried footer link.
Trust the brand/seller before paying	Why Choose Us, reviews, and policies are surfaced early — not only in the footer.
Convenience / low effort	Guest checkout, autofill-friendly forms, minimal required fields.
Repeat / habitual buying	Order history and "buy again" affordance in My Orders.
Social proof	Rating + review count visible on every product card, not only the PDP.

Business Goals

Ranked by priority. Every homepage and PDP requirement in this document ties back to one of these goals — if a proposed design element in Figma doesn't serve one of them, it should be cut.

#	Goal	What "working" looks like
1	Product discovery	A customer with only a vague need ("my hair is falling out") finds a relevant product in under 3 taps via Shop by Concern or Search.
2	Conversion	Product card → PDP → Cart → Checkout has no unnecessary step; guest checkout is available; mobile checkout completes in 3 taps or fewer after the cart.
3	Trust	New visitors can verify legitimacy (policies, reviews, secure payment) without leaving the page they're on.
4	Average order value	Related Products and Frequently Bought Together on the PDP and Cart page do real cross-sell work.
5	Repeat purchase	My Orders makes reordering a past product effortless; order tracking reduces "where is my order" support load.
6	Operational simplicity	Admin can manage catalog, orders, and reviews without engineering support for routine tasks.

Design principle: when a requirement in this document could be interpreted two ways, resolve it in favor of the option that reduces steps between "customer has a need" and "order placed" — this is a conversion-first product within a trust-first brand feel.

Flat, shallow architecture — no page is more than three clicks from Home. This is the full information architecture for navigation, footer links, and route planning.

- › **Home**
- › **Shop**
 - › All Products
 - › Hair Care
 - › Skin Care
 - › Cosmetics
 - › Health Care
 - › Wellness
- › **Product Details**
- › **Cart**
- › **Checkout**
- › **Order Confirmation**
- › **My Account**
 - › Profile
 - › My Orders
 - › Wishlist
 - › Addresses
 - › Account Settings

- › **About Us**
- › **Contact Us**
- › **FAQ**
- › **Privacy Policy**
- › **Terms & Conditions**
- › **Shipping Policy**
- › **Return & Refund Policy**

Navigation placement rule

Shop, Search, Account, Wishlist and Cart live in the persistent header on every page. About, Contact, FAQ and all policy pages live in the footer only — they should never compete with shopping actions in the primary nav.

URL Structure (for SEO & dev routing — see also Section 20)

Page	Clean URL pattern
Home	/
Category listing	/shop/hair-care, /shop/skin-care, /shop/cosmetics, /shop/health-care, /shop/wellness
All products	/shop
Shop by concern	/concern/hair-fall, /concern/acne-care, etc.
Product details	/product/[product-slug]
Cart / Checkout	/cart, /checkout
Account	/account/orders, /account/wishlist, /account/addresses
Login / Signup	/login, /signup, /forgot-password (Section 21)
Order tracking	/account/orders/[order-id]/track (Section 22)
Admin	/admin/login, /admin/dashboard, /admin/products, /admin/categories, /admin/orders, /admin/customers, /admin/inventory (Section 23) — disallowed in robots.txt (Section 20)

Three primary journeys. Every screen named below is specified in Sections 6–13.

Primary Flow — Category-Led Discovery

ALTERNATIVE FLOW — SEARCH-LED, DIRECT PURCHASE

ACCOUNT & POST-PURCHASE FLOW

Flow Rules

- **Guest checkout is always available.** Login/account creation is offered but never forced before Checkout — an account is only required to view My Orders afterward, and can be created inline at Order Confirmation.
- **Buy Now bypasses the cart page** and routes straight to Checkout with a single-item order pre-filled; the customer can still return to Cart from there.
- **Every step backward is possible** — Cart, Checkout and Order Confirmation all keep Continue Shopping / Back links so no flow is a dead end.
- **Wishlist is a parallel, non-blocking path** — a product can move Wishlist → Cart at any point without losing its wishlist entry.

Homepage Requirements

Eleven stacked sections, in order. Each is specified for content, behavior and priority so Figma frames map 1:1 to this list.

6.1 Header (sticky, persistent on all pages)

Element	Requirement
Logo	Left-aligned (mobile: centered with menu icon left, icons right). Links to Home.
Search	Persistent search bar on desktop; icon that expands to full-width overlay on mobile. See Section 13.
Account	Icon → login/signup if logged out, dropdown (Profile, Orders, Logout) if logged in.
Wishlist	Icon with item-count badge; links to /account/wishlist.
Cart	Icon with item-count badge; opens a slide-out mini-cart on desktop, routes to /cart on mobile.
Navigation	Shop (mega-menu with the 5 categories + Shop by Concern shortcuts), About, Contact. Collapses to a hamburger drawer below 768px.

6.2 Hero

Content

One confident headline (benefit-led, not brand-led — e.g. a promise about skin/hair, not "Welcome to our store"), one supporting line of ≤18 words, a single primary CTA ("Shop Now"), and a lifestyle-plus-product visual (never a stock banner).

Behavior

Optional 2–3 slide rotation max (new arrivals / best sellers / a seasonal concern) with visible dots and swipe support on mobile; auto-rotate pauses on interaction. CTA routes to /shop or a featured collection.

6.3 Shop by Category

Five category cards (Hair Care, Skin Care, Cosmetics, Health Care, Wellness) — image-led, name overlay, no price. Horizontal scroll on mobile, grid of 5 on desktop. Each links to its /shop/[category] listing.

6.4 Featured Products

4–8 curated products (admin-selectable, not auto-generated) in a responsive grid. **Product card contents:** image, name, one-line benefit (not the full description), star rating + review count, price (+ original price/discount badge if applicable), wishlist toggle (heart icon, top-right of image), Add to Cart button.

6.5 Best Sellers

Auto-populated by sales volume or admin override. Same card as Featured Products but omits the benefit line to emphasize rank/popularity; may include a "Best Seller" badge.

6.6 Shop by Concern

The trust-building, discovery-first section — this is what differentiates the site from a generic catalog. Concern tiles (Hair Fall, Dry Hair, Skin Hydration, Acne Care, Dull Skin, Daily Wellness) link to a filtered listing (/concern/[slug]) that pulls products tagged with that concern across categories, not one category alone.

6.7 Why Choose Us

Quality Products

Safe & Trusted

Secure Payment

Fast Delivery

Sourced & tested claim,
ingredient transparency.

Dermat./lab-tested or
certification badges.

SSL/UPI/card badges,
encrypted checkout.

Realistic delivery-window
promise.

5th point (optional): **Customer Support** — response-time promise, contact channel. Presented as icon + short label, not paragraphs.

6.8 Brand Story

Short (2–3 sentence) founder/brand narrative with a supporting image and a soft CTA ("Learn Our Story" → About Us). This is the one place on the homepage allowed to feel personal/editorial rather than transactional — it's what signals "human-designed" over template.

6.9 Customer Reviews

3–6 review cards in a carousel: customer name (first name + last initial), star rating, review excerpt, and the specific product purchased (as a small linked chip) — tying social proof directly back to a product builds more trust than generic testimonials.

6.10 Newsletter / Final CTA

Single email field + subscribe button, one-line incentive copy (e.g. first-order discount). Full-width band, visually distinct background (accent tint), placed directly above the footer.

6.11 Footer

Column 1

About, brand blurb, social
icons.

Column 2

Shop — all 5 categories
linked.

Column 3

Customer Support —
Contact, FAQ, Track Order.

Column 4

Policies — Privacy, Terms,
Shipping, Returns.

Bottom bar: payment method icons (UPI, cards, net banking), copyright line. Collapses to accordions on mobile.

Shop / Product Listing Page

Used for both "All Products" and each individual category/concern listing — same template, different query.

Page Structure

1. **Page title + breadcrumb** — e.g. Home / Shop / Hair Care.
2. **Search bar** — pre-scoped to search within the current listing (optional; falls back to global search).
3. **Filter + Sort bar** — sticky on scroll on desktop; opens as a bottom sheet on mobile.
4. **Product count** — "Showing 24 of 138 products".
5. **Product grid** — using the standard Product Card component (Section 16).
6. **Pagination or "Load More"** — Load More preferred on mobile for scroll continuity; numbered pagination acceptable on desktop.

Filters

Filter	Behavior
Category	Multi-select checkboxes; hidden on a category-specific listing.
Price	Min-max range slider + preset bands.
Brand	Multi-select, searchable list if >10 brands.
Rating	"4★ & up" style single-select tiers.
Availability	"In Stock Only" toggle.
Product Type	e.g. Serum, Cream, Oil — dependent on category.

Sort

Option	Default order
Relevance	Default state
Newest	By listing date, descending
Price: Low → High	Ascending
Price: High → Low	Descending
Best Selling	By units sold
Top Rated	By average rating, min. review threshold

Responsive Behavior

Desktop

1440 / 1280

Filters as a persistent left sidebar (240px). 4-column product grid. Sort as a top-right dropdown.

Tablet

768

Filters collapse into a "Filter" button that opens a side drawer. 3-column product grid. Sort stays a dropdown.

Mobile

390

Sticky Filter + Sort bar (two buttons, each opens a bottom sheet). 2-column product grid.

Empty result state

Show a friendly empty state (not a blank grid) with a "Clear Filters" action and 4 fallback suggested products when a filter combination returns zero results.

Product Details Page

The highest-stakes page for trust and conversion — it must answer "what is this, does it work for me, and is it safe" before asking for the sale.

Above the Fold

Left — Gallery

4–6 image slots (thumbnails on desktop, swipeable dots on mobile), pinch-zoom on mobile, one lifestyle/in-use image included (not only packshots).

Right — Purchase Panel

Product name, star rating + review count (anchor-links down to Reviews tab), price with original price + discount % if applicable, quantity selector, **Add to Cart** (secondary style) + **Buy Now** (primary style) side by side, wishlist toggle, delivery info (pincode check + estimated delivery date + COD availability).

Product Benefits

3–5 short benefit bullets directly under the purchase panel (e.g. "Reduces hair fall in 6 weeks", "Non-comedogenic") — this is the fast-read layer before the customer commits to reading full tabs below.

Information Tabs / Accordion Sections

Tab	Content
Description	Full product story — what it is, who it's for.
Benefits	Expanded version of the fast-read bullets, with reasoning.
Ingredients	Full INCI/ingredient list; highlight 2–3 hero ingredients with a one-line explanation each — this is the #1 trust-builder for this category.
How to Use	Numbered steps, frequency, any patch-test guidance for cosmetics/skincare.
Specifications	Size/volume, shelf life, country of origin, product form.
Reviews	Rating distribution bar chart, filter by rating, photo reviews if available, "Write a Review" CTA (post-purchase gated).

Desktop: horizontal tabs. Mobile: stacked accordions, Description expanded by default.

Below the Fold

Related Products

Same category or same concern tag, 4–8 items, standard product card.

Frequently Bought Together

2–3 complementary items pre-checked with a combined price and a single "Add All to Cart" action — a direct AOV lever.

Non-negotiable for this category: Ingredients and How to Use must never be hidden behind an extra click beyond the tab/accordion itself — health and cosmetics buyers cite exactly this information as their top purchase blocker.

09 SECTION 09 Cart Requirements

Kept lightweight and editable — the cart's job is to confirm the order is correct, not to sell.

Cart Line Item

Product image, name (linked to PDP), unit price, quantity stepper (+/-, with stock-limit enforcement), remove action (icon, with an "Undo" toast rather than a confirm dialog), move-to-wishlist action, line subtotal.

Order Summary Panel

Subtotal	Sum of line items
Shipping	Flat fee, free-shipping threshold, or "Calculated at checkout"
Discount	Coupon code field + applied discount line (only shown if used)
Total	Bold, largest weight on the page

Two actions: **Continue Shopping** (secondary, returns to Shop) and **Proceed to Checkout** (primary, full-width on mobile).

Empty Cart State

Friendly illustration/icon, short copy ("Your cart is empty — let's fix that"), and a CTA back to Shop or Best Sellers — never a bare "Your cart has no items" text on a blank page.

Checkout Requirements

Single biggest conversion lever on the site. Mobile checkout should complete in 3 taps or fewer after Cart, per Section 03's conversion goal.

Steps

Presented as a single scrolling page with clear step sections on mobile (not 6 separate page loads); desktop may use a 2-column layout — form steps on the left, sticky order summary on the right.

Payment Options

UPI

Default/preferred option, shown first.

Credit / Debit Card

With standard card-brand icons.

Net Banking

Bank selector dropdown.

Cash on Delivery

If supported for the delivery pincode; shows any COD handling fee upfront.

Order Review & Trust

- Order summary (items, quantities, totals) always visible/collapsible — never requires leaving the payment step to double-check.
- Total amount shown with full breakdown (subtotal + shipping + discount = total) — no charges introduced for the first time at the final step.
- Secure payment indication (lock icon + "Secure Checkout" label + payment logos) present on the Payment step specifically, not just the footer.
- Guest checkout available at Customer Information — the step uses the shared Login / Create Account / Continue as Guest screen specified in Section 21, so a guest never has an account forced on them.

Order Confirmation

The relief-and-next-step page. Confirms the order succeeded and immediately gives the customer something useful to do next.

Confirmation Content

Success state (checkmark/illustration, not just text), order number (copyable), estimated delivery date, purchased products (thumbnail + name + qty + price), order total, delivery address summary.

Actions

Track Order (primary) → routes to My Orders / Order Details.
Continue Shopping (secondary) → Home or Shop. For guest checkouts, an inline "Create an account to track this order faster next time" prompt (email pre-filled, one field to set a password).

An order confirmation email/SMS with the same core details is sent immediately — this page should not be the customer's only record of the order.

My Account

Five sub-sections behind a shared left-nav (desktop) / tab-switcher (mobile). Login, signup and password-recovery screens that get a customer into this area are specified in Section 21; the full Track Order screen is specified in Section 22.

Profile

Name, email, phone — editable fields with inline validation; email/phone change may require re-verification.

My Orders

Element	Detail
Order history list	Order #, date, item thumbnails, total, status badge (color-coded per Section 19 order-status system).
Order status	Current stage shown as a horizontal progress tracker on Order Details — full spec in Section 22.
Order details	Full item list, address used, payment method, invoice download.
Track order	Live status + carrier tracking link/number if available.

Each past order also carries a **"Buy Again"** action that re-adds all items to the cart — directly serves the Household Restocker persona (Section 02).

Wishlist

Saved products grid (standard product card, minus quantity selector). Actions: Remove, Add to Cart. Out-of-stock saved items are visually flagged, not hidden.

Addresses

Add / Edit / Delete address cards; "Set as Default" toggle; default address pre-selected at Checkout.

Account Settings

Password change, communication preferences (email/SMS marketing opt-in), delete-account request.

Search Experience

Search is the fastest path to purchase for the Household Restocker persona (Section 02) — it must return relevant results in one interaction, not force a filter session.

Capabilities

Product search

Matches product name, benefit tags, and ingredient keywords.

Category search

A typed category name (e.g. "skin care") surfaces a category shortcut above product results.

Suggestions

Live dropdown after 2 characters: top 4–5 matching products (thumbnail + name + price) + matching category chips.

Recent searches

Shown when the search field is focused but empty (max 5, clearable).

Worked Example

User searches "hair oil"

1. Category suggestion chip: **Hair Care** appears at the top of the dropdown.
2. Product results: all products matching "hair oil" in name/tags, ranked by relevance then rating.
3. Full results page (/search?q=hair+oil) reuses the Shop/PLP template (Section 07) — same filters, same sort, same product card — so search results never feel like a separate, lesser experience.

No-Results State

Never a dead end: show "No results for '[query]'", a spelling-tolerant suggestion if available ("Did you mean...?"), and a fallback grid of Best Sellers so the customer isn't stranded.

Admin Dashboard

Basic-scope internal tool — functional and fast, not customer-facing polish. Table-based CRUD screens are appropriate here. This page is the summary view; the full field-level spec for every module below, plus Admin Login and Inventory Management, is in Section 23.

Products

Add / Edit / Delete products; manage multiple images per product; set price, stock quantity, category, and description; bulk stock-status toggle (In Stock / Out of Stock).

Orders

View all orders (filterable by status/date); update order status (see Section 19 order-status flow); view customer & shipping details; view/update payment status.

Customers

Customer list (searchable); customer detail view showing profile info and full order history for that customer.

Categories

Add / Edit / Delete categories; reorder display sequence used on the homepage's Shop by Category section.

Reviews (Moderation)

View all submitted reviews; Approve (publishes to the PDP) or Delete (spam/inappropriate) — reviews are held in a pending state until approved, never auto-published.

Admin access: single admin role is sufficient for this basic scope (no multi-role permissions required in v1); all admin routes sit behind authenticated login, separate from the customer account system.

Design System

A palette built specifically for a Cosmetics + Health Care combination — deliberately not the pastel-pink-on-white beauty cliché or the clinical blue/green healthcare cliché. Plum reads premium and beauty-appropriate without being generic "girly" pink; terracotta carries warmth and vitality for the health/wellness side; gold signals quality across both.

Color Palette

 Primary — Plum #6E2A45 Headers, nav, primary text on light, brand moments	 Secondary — Terracotta #C1662E Primary CTAs, price highlights, energy accents	 Accent — Warm Gold #B8934A Badges, ratings, premium highlights, dividers	 Background — Warm Ivory #FBF8F4 Page background — warmer & softer than stark white
 Surface — White #FFFFFF Cards, product tiles, modals	 Text — Charcoal Ink #2A2420 Primary text — warm dark, not pure black	 Border #E7DECF Card borders, dividers, input outlines	 Success — Sage #4F7A5B In stock, order delivered, confirmations
 Error — Brick #A8402F Errors, out of stock, destructive actions			

Color psychology rationale

Plum communicates quality and trust without defaulting to the clinical blue used by most health sites; terracotta reads as warm and human rather than the neon/electric tones common in generic templates; a muted (not bright) sage green is reserved strictly for status/confirmation, so it never competes with the brand palette. All accent colors are used at low frequency — the ivory/white/ink base does the majority of the work, keeping the site calm and product-forward.

Typography — Poppins

H1	Discover what your skin needs	SemiBold 600 · 40/48 desktop · 28/34 mobile
H2	Shop by Concern	SemiBold 600 · 28/34 desktop · 22/28 mobile
H3	Hydrating Face Serum	Medium 500 · 20/26 desktop · 18/24 mobile
BODY LARGE	A lightweight serum that locks in moisture for 24 hours.	Regular 400 · 16/26

BODY	Free delivery on orders above ₹499.	Regular 400 · 14/22
CAPTION	Only 4 left in stock	Regular 400 · 12/16
BUTTON	ADD TO CART	Medium/SemiBold 500–600 · 14–15/1

Pairing note: Poppins is specified for headings, buttons and UI chrome as required. For long-form body copy (Description tab, About Us), pairing Poppins with a plain reading-weight sans like Inter at Body/Body Large sizes is recommended for readability at length — optional, Poppins-only is fully acceptable.

Design System — Spacing & Iconography

Spacing Scale (8pt grid)

Token	Value	Usage
xs	4px	Icon-to-label gaps, badge padding
sm	8px	Form field internal padding, tight stacks
md	16px	Card padding, standard element gaps
lg	24px	Section-internal spacing
xl	32px	Between homepage sections (mobile)
2xl	48px	Between homepage sections (tablet/desktop)
3xl	64px	Hero vertical padding (desktop)

Radius & Elevation

Radius

Buttons 8px · Cards/images 12px ·
Pills/badges 999px · Modals 16px

Shadow

One soft elevation only: 0 4px 16px
rgba(42, 36, 32, 0.08) — used for
cards on hover and modals. No heavy
drop shadows.

Borders

1px solid Border token on cards at rest;
shadow replaces border on
hover/elevation, not both at once.

Iconography

One consistent outline icon set throughout (e.g. Phosphor or Feather-style, 1.5px stroke) — never mix filled and outline icons. Icons are functional (search, cart, wishlist, filter, account) — decorative icon use is minimal, in keeping with the product-photo-forward intent.

Imagery Direction

- Product packshots on a consistent warm-neutral or ivory backdrop (not pure white studio) for a cohesive, premium catalog feel.
- At least one lifestyle/in-use image per product beyond the packshot set.
- Category and hero imagery should include real texture (skin, hair, hands) rather than abstract graphic compositions.
- Consistent aspect ratios: product images 1:1, category cards 4:5, hero 16:9 (desktop) / 4:5 (mobile).

Component Library

Every component below should exist as a single Figma component with the listed variants/states — never a one-off redraw per screen.

● Header

Sticky, 72px desktop / 56px mobile. States: default, scrolled (compact + shadow).

● Navigation / Mega Menu

Shop dropdown with category thumbnails + concern shortcuts. States: default, open, active-route.

● Search Bar

Collapsed icon / expanded field / active-with-suggestions states.

● Button

Variants: Primary (terracotta fill), Secondary (plum outline), Ghost (text-only). States: default, hover, active, disabled, loading.

● Product Card

Image, wishlist toggle, name, benefit line, rating, price/discount, Add to Cart. States: default, hover, out-of-stock, on-sale.

● Category Card

Image + label overlay. States: default, hover (scale/overlay darken).

● Rating

Star row (filled/half/empty) + numeric average + review count, two sizes (card / PDP).

● Price

Current price (bold), original price (strikethrough, muted), discount %. Handles "price on sale" and "no discount" states.

● Discount Badge

Small pill, terracotta/gold, e.g. "20% OFF" or "BEST SELLER".

● Filter

Checkbox group / range slider / chip-select variants; sidebar (desktop) and bottom-sheet (mobile) container variants.

● Sort

Dropdown (desktop) / bottom-sheet radio list (mobile).

● Breadcrumb

Text trail with "/" separators, current page non-clickable/muted.

● Quantity Selector

Stepper with -, numeric input, +. Disabled state at stock limit.

● Cart Item

Row layout: image, name, price, quantity selector, remove, subtotal. Mobile: 2-row stacked variant.

● Review Card

Avatar/initials, name, rating, date, product-purchased chip, review text.

● Input

Text/email/phone/select variants. States: default, focus, filled, error (with inline message), disabled.

● Dropdown

Single & multi-select variants, with search for long lists (e.g. Brand filter, Net Banking selector).

● Modal

Centered (desktop) / bottom-sheet (mobile) variants; used for quick-view, delete-confirmation where truly needed.

● Toast

Bottom-anchored, auto-dismiss ~3s. Variants: success (added to cart), info (item removed + undo), error.

● **Pagination**

Numbered (desktop) and "Load More" button (mobile) variants.

● **Footer**

4-column (desktop/tablet) and accordion-stacked (mobile) variants.

Responsive Requirements

Four target frames for Figma, designed mobile-first and enhanced upward.

Mobile	390px	Tablet	768px	Laptop	1280px	Desktop	1440px
Base design. 1-col hero, 2-col product grid, hamburger nav, bottom-sheet filters, stacked footer accordions.		3-col product grid, filter drawer (not sidebar), 2-col category grid, footer becomes 2 columns.		4-col product grid, persistent filter sidebar appears, full horizontal nav with mega-menu, 4-col footer.		Max content width ~1280px centered with generous side margins; same grid as Laptop with more breathing room, not more columns.	

Component Behavior Across Breakpoints

Component	390 (Mobile)	768 (Tablet)	1280 / 1440 (Desktop)
Header	Logo + hamburger + icons; search as icon	Full logo + condensed nav; search as icon	Full nav + persistent search bar
Hero	Stacked, image below text, 4:5 image	Stacked or side-by-side, 16:9 image	Side-by-side, 16:9 image
Product Grid	2 columns	3 columns	4 columns
Filters	Bottom sheet via button	Side drawer via button	Persistent left sidebar
PDP Layout	Stacked: gallery, then purchase panel	Stacked, wider gallery	Side-by-side, 55/45 split
Checkout	Single column, sticky bottom summary bar	Single column, expanded spacing	2-column: form left, sticky summary right
Footer	Accordion-collapsed sections	2-column expanded	4-column expanded

Touch targets: all interactive elements maintain a minimum 44×44px tap area on mobile/tablet regardless of visual size, per Section 18.

Accessibility

Baseline target: WCAG 2.1 AA. These are binding constraints on the Design System (Section 15), not optional polish.

- ✓ **Color contrast:** body text $\geq 4.5:1$ against its background; large text/icons $\geq 3:1$. Ink (#2A2420) on Ivory (#FBF8F4) and White on Plum (#6E2A45) both pass; verify any new tint combinations before use.
- ✓ **Keyboard navigation:** every interactive element (nav, filters, product card actions, cart, checkout form) reachable and operable via Tab/Shift+Tab/Enter/Space, in a logical order matching visual layout.
- ✓ **Focus states:** a visible focus ring (2px, high-contrast, not color-alone) on every focusable element — never suppressed with `outline: none` without a replacement.
- ✓ **Alt text:** descriptive alt text on all product and content images (e.g. "Hydrating face serum, 30ml bottle on cream background"); decorative images marked `empty-alt`.
- ✓ **Accessible forms:** every input has a visible, associated label (not placeholder-only); errors are announced inline with text, not color alone; required fields marked in text.
- ✓ **Readable typography:** body text minimum 14px on mobile; line length capped for long-form content (Description tab, About Us) for readability.
- ✓ **Touch-friendly targets:** minimum 44×44px tap area for buttons, icons, quantity steppers, and filter chips.
- ✓ **Screen-reader labels:** icon-only buttons (search, wishlist, cart, remove) carry an `aria-label`; cart/wishlist count badges are announced (e.g. "Cart, 3 items"); star ratings expose the numeric value, not only visual stars.

Functional Requirements

The complete feature checklist a developer should build against, plus the order-status state machine referenced from Sections 11, 12, 14, 22 and 23.

Core Feature Matrix

✓ Product browsing (category & all-products)	✓ Multi-step checkout with guest option
✓ Product search with suggestions	✓ Payment (UPI, Card, Net Banking, COD)
✓ Product filtering (6 filter types, Section 07)	✓ Order creation & confirmation (page + email/SMS)
✓ Product sorting (6 sort options, Section 07)	✓ Login, signup & forgot password (Section 21)
✓ Product details with tabs/accordion	✓ Order history & order tracking (Section 22)
✓ Wishlist (add/remove, persists per account)	✓ Customer account (profile, addresses, settings)
✓ Add to Cart / Buy Now	✓ Product reviews (submit, moderate, display)
✓ Cart management (edit qty, remove, undo)	✓ Contact form (routes to support email/inbox)
	✓ Admin dashboard & management (Sections 14, 23)

Order Status Flow

This is the single authoritative status system for the whole site — Order Confirmation (Section 11), My Orders (Section 12), the detailed Order Tracking screens (Section 22) and Admin Order Management (Section 23) all reuse it exactly as defined here.

Side states (can branch off at any point before Delivered, shown with the same status badge system): **CANCELLED** **RETURNED** **REFUNDED** — each reachable from Admin (Section 23) and reflected live in My Orders / Track Order (Sections 12 & 22).

Status	Customer sees	Triggered by
Order Placed	"Order received" confirmation	Successful checkout
Confirmed	"Order confirmed" + est. delivery	Payment verified (or COD accepted)
Processing	"Preparing your order"	Admin action
Packed	"Your order is packed and ready to ship"	Admin action
Shipped	Tracking number/link if available	Admin action
Out for Delivery	"Arriving today" style message	Admin/courier update
Delivered	Delivery confirmed, review prompt unlocked	Admin/courier update
Cancelled	Cancellation reason, refund note if paid	Customer or Admin action
Returned	Return received confirmation	Admin action, post-return request
Refunded	Refund amount & expected credit timeline	Admin action

Non-functional requirements — how the site behaves, not what it does. These are development-phase requirements, not design-phase, but they constrain design decisions (image weight, font loading, layout stability).

Performance & Reliability

- **Fast:** target Largest Contentful Paint under 2.5s on 4G mobile.
- **Responsive:** no layout shift on image/content load (reserve image dimensions).
- **Secure:** HTTPS/SSL site-wide, no mixed content, secure payment handling (no card data touching your own servers directly).
- **Scalable:** catalog and order data structured to grow past a few hundred SKUs without a re-architecture.
- **Easy to maintain:** admin-editable content (homepage featured products, banners, categories) — no code changes for routine catalog updates.

Technical SEO

- **Image optimization:** responsive/compressed images, modern formats (WebP/AVIF with fallback), lazy loading below the fold.
- **Clean URLs:** human-readable slugs (Section 04) — no query-string-only product URLs.
- **Metadata:** unique title + meta description per product/category page, Open Graph tags for social sharing.
- **Sitemap.xml:** auto-generated, submitted to search consoles, updated on new product publish.
- **Robots.txt:** allows indexing of shop/product/category pages, disallows cart/checkout/account/login and all /admin routes.
- **Structured data:** Product schema (price, availability, rating) for rich snippets in search results.

Mobile-first performance note: per current beauty e-commerce benchmarks, the majority of checkout traffic on sites like this is mobile, while conversion rates industry-wide remain low (commonly cited in the low single digits) — page weight and checkout speed on mobile are conversion levers, not just technical nice-to-haves.

Customer Login & Account

Kept deliberately simple: one shared Login screen, one Create Account screen, one Forgot Password flow — no social login, no multi-factor setup, no advanced identity features. Browsing is always guest-friendly; login is only ever asked for at Checkout or at My Account.

Login Screen

A single form (modal on desktop where triggered from the header, full page when triggered from Checkout) containing:

Element	Requirement
Email / Mobile Number	One field, auto-detects which was entered — no separate tabs for "email login" vs "mobile login".
Password	Standard masked field.
Show / Hide Password	Eye icon inside the field, toggles plain text — required for a mobile-first audience typing on-screen.
Forgot Password	Text link directly under the password field, right-aligned.
Login Button	Primary, full-width on mobile. Disabled until both fields are filled.
Create Account	Secondary link/button below Login — "New here? Create an account."
Continue as Guest	Always visible, never hidden behind a scroll or a smaller/greyed-out treatment than Login — this is what keeps checkout friction-free.

Existing Customer Flow

"Previous Page" matters: if login was triggered mid-checkout or mid-wishlist-save, the customer returns to that exact point, not to Home — never make them re-navigate.

New Customer Flow

Fields: Name, Mobile Number, Email, Password, Confirm Password. Inline validation on blur (not only on submit): password strength hint, confirm-password mismatch shown immediately, mobile number format check. On success the customer is auto-logged-in — no separate "now log in with your new account" step.

Forgot Password Flow

OTP is a single 4–6 digit code sent to whichever channel (email or SMS) matches what was entered; include a visible "Resend OTP" with a short cooldown timer and a clear expiry message rather than a silent failure.

Guest Shopping Flow

Login / Create Account / Guest

Continue Checkout

Payment

Order Confirmation

Rule: never force login while browsing — not on Home, Shop, Product Details, Cart, or Wishlist-viewing. The only point login is presented is at Checkout (and there, Continue as Guest is one of the three equally-visible options on that same screen), or when the customer deliberately taps Account/Wishlist icons in the header while logged out.

Order Tracking

"Where is my order" is the single most common post-purchase question in this category — this screen exists to answer it without a support ticket.

Customer Flow

A guest who checked out without an account reaches the same Order Details/Track Order screen directly from the link in their confirmation email/SMS — no login required for that one order.

Order Timeline

The current stage must be unmistakable at a glance — completed steps in solid success-green, the current step highlighted in terracotta, future steps muted. This is the same 7-stage system defined in Section 19.

Mobile: same stepper compressed to icon-only dots with the current step's label shown as a text line above the stepper (e.g. "Current status: Packed") rather than shrinking all 7 labels illegibly.

Order Details — Fields

Order ID	Copyable, e.g. #ZNS10234	Price	Per-unit and line total
Order Date	Date order was placed	Total Amount	Full order total
Product Name	Per line item	Payment Status	Paid / Pending / COD
Product Image	Thumbnail per line item	Delivery Address	Full address used for this order
Quantity	Per line item	Estimated Delivery Date	Shown next to Current Order Status

Order Actions (status-dependent)

Action	Shown when
Cancel Order	Order Placed → Processing (before Packed)
Track Order	Always, from Confirmed onward
Download Invoice	From Confirmed onward
Contact Support	Always visible — never gated by status
Reorder	Delivered or Cancelled — re-adds the same items to cart
Return / Refund	Delivered only, within the return window stated in the Return & Refund Policy

Only relevant actions for the current status are shown — never a full action list with irrelevant ones disabled/greyed, which reads as clutter rather than clarity.

Order Status (reference)

Order Placed · Confirmed · Processing · Packed · Shipped · Out for Delivery · Delivered · Cancelled — full definitions and the branching Returned/Refunded states are the single source of truth in Section 19.

Admin Management

The full field-level spec for the basic admin panel introduced in Section 14. Deliberately basic-scope — a single admin role, table-based CRUD, no enterprise features (no multi-role permissions, no audit log, no bulk import in v1).

Admin Login

Same Input/Button components as the customer Login screen (Section 21) for visual consistency, but on a completely separate route (/admin/login) and session — an admin session must never double as a customer session. Includes Login, Logout (in the admin header, always visible), and route protection: any /admin/* URL redirects to /admin/login if not authenticated.

Admin Dashboard — Essential KPIs Only

Six tiles only — no charts, graphs or analytics widgets in v1; Recent Orders tile links straight into Order Management below. Low Stock tile is styled in the Error/Brick token specifically so it draws the eye.

Product Management

Capability	Detail
Add / Edit / Delete Product	Single form: Product Name, Category (dropdown from Category Management), Price, Discount Price (optional), Stock Quantity, Description, Product Image(s) upload.
Product Status	ACTIVE OUT OF STOCK — manual toggle or automatic when Stock Quantity reaches 0.
Delete	Confirmation required (modal); a product that appears in past orders is archived, not hard-deleted, so order history stays intact.

Category Management

Capability	Detail
Add / Edit / Delete Category	Category Name, Category Image, Enable/Disable toggle.
Fixed set (v1)	Hair Care, Skin Care, Cosmetics, Health Care, Wellness — admin can rename/re-image but the five-category structure matches the sitemap (Section 04) and should not be casually expanded.
Disable	A disabled category is hidden from Shop by Category and navigation but its products remain manageable in Product Management (reassign category before deleting).

Order Management

Capability	Detail
View All Orders	Table: Order ID, Customer, Date, Total, Payment Status, Order Status.
Search Orders	By Order ID, customer name, or mobile number.

Order Details	Full line items, customer details, delivery address, payment status.
Update Order Status	Single dropdown using the exact 7-stage system from Section 19, plus Cancelled / Returned / Refunded.

Live sync: the moment admin updates an order's status here, the same status is reflected immediately in the customer's My Orders and Track Order screens (Sections 12 & 22) — this is the single most important functional link between the two modules in this document.

Customer & Inventory Management

Customer Management

View Customers (list), Search Customers (name/email/mobile), Customer Details (profile), Customer Order History. Kept basic — no manual editing of customer data, no messaging tool built in v1.

Inventory Management

View Stock (quantity per product), Update Stock Quantity (inline edit), Mark Out of Stock (manual override), Low Stock identification (auto-flagged below an admin-set threshold, e.g. 10 units — same list that feeds the Dashboard's Low Stock tile).

Complete System Flow

The full picture — every screen in Sections 4–23 in one continuous path, for customer and admin.

Customer

Admin

Where the Two Systems Meet

Single source of truth

Every order has exactly one status value in the database. Admin Order Management (Section 23) writes it; Order Confirmation, My Orders and Track Order (Sections 11, 12, 22) only ever read it. There is no separate "admin view" and "customer view" of order status that could drift out of sync.

Final UX Checklist

Run through this before calling design or development "done." Each item traces back to a section above.

Discovery & Navigation

- ✓ A visitor with only a symptom/concern (not a product name) can reach a relevant product in 3 taps or fewer via Shop by Concern or Search.
- ✓ Every page is reachable within 3 clicks of Home (Section 04).
- ✓ Filters and sort behave identically whether arrived at via Category, Concern, or Search (Sections 07 & 13).

Trust

- ✓ Ingredients and How to Use are never more than one tap away on the PDP (Section 08).
- ✓ Reviews show real distribution, not only 5-star cherry-picks, and are tied to specific products (Sections 06, 08).
- ✓ Secure-payment signaling appears at the Payment step itself, not only in the footer (Section 10).
- ✓ All policy pages (Privacy, Terms, Shipping, Returns) are complete and linked from the footer (Section 04).

Conversion

- ✓ Guest checkout works end-to-end with no forced account creation (Section 10).
- ✓ Mobile checkout completes in 3 taps or fewer after Cart (Section 10).
- ✓ Cart and PDP totals match Checkout totals exactly — no surprise charges introduced at Payment (Section 09, 10).
- ✓ Related Products and Frequently Bought Together are populated with genuinely complementary items, not random picks (Section 08).

Login, Account & Order Tracking

- ✓ No page under Home, Shop, PDP, Cart or Wishlist-viewing ever forces a login — Continue as Guest is always available and equally visible (Sections 21, 22).
- ✓ Show/Hide Password, inline validation, and a working Forgot Password + OTP flow are implemented on both the Login and Create Account screens (Section 21).
- ✓ Order Timeline clearly highlights the current status (color + label, not color alone) and only shows actions relevant to that status (Section 22).
- ✓ A guest's order confirmation email/SMS links directly to that order's Track Order screen with no login required (Sections 11, 22).

Admin Management

- ✓ Admin login is fully separate from customer login (different route, different session) and every /admin/* route is protected (Section 23).
- ✓ Dashboard shows exactly the six essential KPIs — no analytics charts or extra widgets have crept in (Section 23).
- ✓ Updating an order's status in Admin reflects immediately in the customer's My Orders and Track Order screens, with no delay or manual refresh required (Sections 12, 22, 23, 24).
- ✓ Low Stock is auto-identified from a stock threshold, not manually tagged by admin (Section 23).

Craft & Consistency

- ✓ All 21 components (Section 16) exist as single reusable Figma components with documented states — no page has a one-off variant.
- ✓ Palette, type scale and spacing (Section 15) are applied consistently across storefront, account, and admin screens — no ad-hoc colors or font sizes outside the system, and admin looks like the same product, not a bolted-on tool.
- ✓ All four breakpoints (Section 17) have been designed, not just extrapolated from desktop — including Login, Account and Order Tracking screens.
- ✓ WCAG 2.1 AA contrast and focus-state checks pass (Section 18).
- ✓ Empty states exist and are designed for: empty cart, empty wishlist, no search results, no filter results, no orders yet, no saved addresses (Sections 07, 09, 12, 13).
- ✓ Loading states (skeletons or spinners, not a blank screen) exist for: product grid, PDP, cart totals recalculation, checkout payment submission, order tracking refresh, and every admin table.
- ✓ Error messages are specific and actionable in plain language ("This mobile number is already registered — try logging in instead" rather than "Error 409") across login, checkout, and every admin form.
